

## Choose iLivTouch® for Liver Health Monitoring!

▶ Detect Early ▶ Diagnose Early ▶ Treat Early

Know Your Liver Health  
at a Touch

It accurately measures:

Level of Liver Fibrosis

Degree of Fatty Liver

Takes only **2** minutes  
Suitable for all body types

Vibration-Controlled Transient Elastography  
is globally recommended by leading health  
authorities as the preferred non-invasive  
test for liver health.

## Liver Health for Better Diabetes Management

Prevention Over Treatment

Over **65%<sup>1</sup>** of diabetics have fatty liver

This combination dangerously worsens **blood sugar control**, harming your heart, brain, liver, and kidneys.

**2x higher risk<sup>2</sup>** of liver cancer with both conditions.

The liver is a **“silent organ”**—often showing no signs until it’s too late.

**Early screening & intervention are crucial for protection.**

2. Diabetes Research and Clinical Practice. 2025 Aug 11:112407.

## Early detection of fatty liver and fibrosis is crucial

### Liver Disease Stages

**i** Fatty liver disease can progress to liver cancer in just 3 steps.

**iLivTouch<sup>®</sup>** based on Vibration-controlled Transient Elastography (TE) technology Helps identify early liver problems in people with diabetes

- Liver stiffness (fibrosis)
- Fat accumulation (steatosis)

▶ Non-invasive and painless

▶ No blood draw needed

▶ Fast and reliable
